# 1. EXECUTIVE SUMMARY

## 1.1 The DriveMe Value Proposition

DriveMe is positioned to become the Nordic region's defining premium mobility ecosystem — a category-defining platform that begins by solving an acute, underserved pain point in the Helsinki Metropolitan Area and evolves, by design, into a vertically integrated luxury transportation group spanning chauffeur services and a premium rental marketplace. The company is built on a single, deceptively simple insight: in a market saturated with ride-hailing applications that move passengers between two points in someone else's vehicle, there exists no professional, licensed, on-demand solution for individuals who need to be driven home, to an event, or across the country in their own car. DriveMe closes that gap.

Under the proposition “Your Driver, Your Car, Your Way,” DriveMe dispatches vetted, professionally licensed drivers directly to the customer, who then operates the customer's personal vehicle for the duration of the booking. This model eliminates the two greatest frictions in the current market: the risk of leaving a vehicle unattended overnight, and the legal and financial exposure of driving under the influence, while fatigued, or while unfamiliar with road conditions.

## 1.2 Phased Launch Strategy

DriveMe's growth architecture is deliberately sequenced to de-risk capital deployment while compounding brand equity, driver supply, and customer relationships across each phase. The platform and booking experience are being built to support all three phases from day one, so that later phases can be switched on without any change to the app the customer already knows.

### Phase 1 — Book a Premium Driver On Demand • LIVE AT LAUNCH

Licensed professional drivers are dispatched via the DriveMe app to operate the customer's own vehicle for nights out, long-distance journeys, private events, business travel, and situations where the customer cannot or should not drive. This is the foundational, revenue-generating product and the sole active booking flow at launch.

### Phase 2 — Hire a Chauffeur (Premium Driver + Premium Car) • COMING SOON

An elite tier pairing a professional chauffeur with a premium vehicle from DriveMe's own fleet, targeting corporate accounts, VIP clients, and luxury travelers. This tier will be visible in the app as “Coming Soon” and activated once Phase 1 has validated demand and generated the cash flow needed to acquire the fleet.

### Phase 3 — Rent a Premium Car • COMING SOON

A self-drive and chauffeur-optional rental marketplace for high-end vehicles. Also flagged “Coming Soon” in the app. The founder's stated plan is to acquire an initial fleet of two to three premium vehicles (Mercedes-Benz S-Class) once Phase 1 has proven the business is generating consistent revenue, at which point Phases 2 and 3 will be switched on in sequence.

## 1.3 The Founder

DriveMe is founded and led by Sohail Noman, who serves as Founder and Chief Executive Officer, holding overall responsibility for strategic vision, company leadership, market execution, and the operational direction of the business. Sohail's role encompasses the end-to-end leadership of DriveMe's growth strategy, from initial market entry in Helsinki through the execution of the phased roadmap and the eventual pursuit of Nordic and global expansion.

Sohail brings direct, hands-on operating experience from Mansio Group Oy's existing cleaning-services venture (Cleava), including customer acquisition, dispute resolution, staff management, and vendor negotiation in the

Helsinki Metropolitan Area — experience directly transferable to DriveMe's driver-network management and B2B partnership development. DriveMe's near-term hiring plan, funded through the capital raise described in Section 7, will expand the team with key hires in operations, dispatch/support, marketing, and compliance to support the scaling milestones outlined in Section 6.

## 1.4 Funding Requirements & ROI Summary

DriveMe is seeking €500,000 in growth capital to fund an 18-month runway to operational break-even and to execute the foundational build-out required for Phase 1 launch and Phase 2 preparation. This capital will be allocated across four priority areas: mobile and web application development for direct in-app booking (real-time dispatch, GPS tracking, and secure payment infrastructure); hyper-localized marketing across the Helsinki Metropolitan Area; key management hires in operations, compliance, and growth marketing; and early-stage preparation of the premium fleet required for Phase 2 and Phase 3.

The investment thesis is underpinned by a disciplined, milestone-based financial trajectory. DriveMe's base case projects Year 1 revenue of €200,000 with €50,000 in profit, scaling to Year 3 revenue of €2,000,000 and profit in excess of €300,000 as the company expands across Finland and into the broader Nordic region, grounded in a Finnish ride-hailing market valued at approximately €325 million and a Helsinki Metropolitan Area population of approximately 1.355 million potential consumers.

## 2. PROBLEM STATEMENT & MARKET OPPORTUNITY

### 2.1 The Structural Gap in Traditional Ride-Hailing

The global ride-hailing model — popularized by platforms such as Uber and Bolt, and deeply embedded in Helsinki's transportation landscape — solves a narrow problem exceptionally well: moving a passenger from point A to point B in a vehicle owned and operated by a third party. What this model fundamentally cannot solve is the far more common scenario in which the customer already possesses a vehicle, but cannot, should not, or does not wish to drive it themselves at that moment.

DriveMe inverts the traditional model. Rather than supplying the vehicle and the driver as a bundled unit, DriveMe supplies the driver as a discrete, on-demand professional service that is overlaid onto the customer's existing asset — closer in spirit to a personal chauffeur or designated-driver service than to a taxi, but delivered with the convenience and digital-first booking experience of a modern ride-hailing application.

### 2.2 Helsinki Metropolitan Area: Market Environment

The Finnish ride-hailing market represents a substantial and well-established commercial category, currently valued at approximately US\$351.08 million (roughly €325 million). The Helsinki Metropolitan Area — Helsinki, Espoo, Vantaa, and Kauniainen — is home to approximately 1.355 million residents, representing the single largest concentrated consumer base in Finland, with above-average disposable income, high rates of personal vehicle ownership, and a well-documented culture of nightlife, corporate travel, and premium hospitality consumption.

| Metric                                | Figure                               |
|---------------------------------------|--------------------------------------|
| Finnish Ride-Hailing Market Size      | US\$351.08M (~ €325M)                |
| Helsinki Metropolitan Area Population | ≈ 1.355 million residents            |
| Core Launch Cities (Phase 1)          | Helsinki, Espoo, Vantaa              |
| National Expansion Cities (later)     | Tampere, Turku, Oulu, Lapland region |

Finland's regulatory environment, while requiring careful compliance navigation (addressed in Section 5), is also a structural advantage for a company built from the outset around licensed, professional drivers. The 2018 transport deregulation opened the for-hire driving market to a wider pool of operators while maintaining licensing, background-check, and vehicle-standard requirements — a framework that rewards operators who can demonstrate professional rigor.

### 2.3 Target Persona Breakdown

#### PERSONA 1 — THE CORPORATE CLIENT

Requires reliable, professional, accountable transportation for executives, airport transfers, and inter-city business travel, with a preference for invoicing over card payments. Values punctuality, discretion, and recurring/scheduled bookings via a corporate account.

#### PERSONA 2 — THE NIGHT-OUT CUSTOMER

Helsinki's nightlife economy generates consistent, high-frequency demand for safe transportation home, particularly on Friday and Saturday nights. Price-sensitive relative to corporate clients but willing to pay a premium for having their own car driven home safely. One of DriveMe's highest-frequency use cases and a primary driver of early referral-based growth.

---

**PERSONA 3 — THE ELDERLY CLIENT**

Finland's aging population values the ability to retain a familiar personal vehicle while removing the burden of driving in winter darkness, ice, and snow. Prioritizes trust, driver familiarity, and low-friction booking.

**PERSONA 4 — THE PREMIUM TOURIST**

International visitors who rent vehicles for flexibility but lack familiarity with local roads and winter conditions. A natural entry point into the future chauffeur and rental offerings once those phases go live.

## 3. THE DRIVEME SOLUTION & PRODUCT ECOSYSTEM

### 3.1 The DriveMe Platform: Direct Booking, App & Web

At the core of DriveMe's value proposition is a purpose-built digital platform — a native mobile application for iOS and Android, and a full-featured web booking portal — built around a single, direct in-app booking flow: a customer opens the app, requests a driver, and confirms the job without a phone call or a third-party dispatcher. The platform is engineered to support all three phases from a single, unified codebase and customer account, so a phase can be turned on for booking the moment it is ready, with no new account, download, or interface for the customer to learn.

#### REAL-TIME DRIVER TRACKING

Upon booking, customers receive live GPS tracking of their assigned driver's location and estimated time of arrival. For the Night-Out and Elderly personas in particular, this is a critical trust signal — customers and family members can monitor a driver's approach and the vehicle's journey home.

#### SECURE DISPATCH & DRIVER MATCHING

DriveMe's dispatch engine matches incoming bookings to the nearest available, qualified driver based on proximity, driver ratings, and customer preferences. All drivers are subject to the vetting standards in Section 5, and the system maintains a complete audit trail of every booking for safety, insurance, and compliance purposes.

#### TRANSPARENT, UPFRONT PRICING

Every booking displays the full estimated cost before confirmation, with any applicable surcharges clearly itemized — directly addressing the unpredictable-fare frustration common with traditional taxi services.

### 3.2 Live at Launch — Book a Premium Driver On Demand

This is the only bookable service at launch. A customer requests a professional driver through the app, specifying pickup location, destination (or duration, for open-ended bookings such as a night-out return journey), and any special requirements. A vetted DriveMe driver is dispatched to the customer's location and, upon arrival, takes the wheel of the customer's own vehicle for the duration of the booking. No fleet acquisition, vehicle financing, or owned-asset insurance underwriting is required for this phase, which is the deliberate design: it lets DriveMe validate demand, driver supply, and service quality with minimal capital intensity before committing to a fleet.

### 3.3 Coming Soon — Hire a Chauffeur & Rent a Premium Car

#### Hire a Chauffeur • COMING SOON

"Premium Driver + Premium Car" — an elite tier in which DriveMe provides both a high-end vehicle and a professional chauffeur, bookable through the same app. This will be shown in the app as a Coming Soon tile so customers know it is on the roadmap. It will target corporate accounts, VIP clients, and special occasions such as weddings and galas, and will launch once the founder has acquired the initial fleet.

#### Rent a Premium Car • COMING SOON

A marketplace through which users can rent high-end vehicles directly, with the option to add a DriveMe chauffeur or self-drive. Also shown as Coming Soon at launch. The founder's plan is to acquire two to three Mercedes-Benz S-Class vehicles once Phase 1 revenue confirms the model is working, at which point both the chauffeur and rental tiles are switched from "Coming Soon" to bookable within the existing app — no rebuild required, since the booking, payment, and dispatch infrastructure is shared across all three tiers from day one.

### 3.4 Pricing Architecture & Payment Integrations

| Item                       | Price                                    |
|----------------------------|------------------------------------------|
| Base Hourly Rate (Phase 1) | €25 / hour (1-hour minimum)              |
| Out-of-Metro Surcharge     | €0.50 / km beyond Helsinki Metro Area    |
| Custom Event Packages      | €200 – €500 (private events, multi-stop) |
| Subscription Tier          | €100 / month for 5 hours of service      |

The €25/hour base rate with a one-hour minimum is calibrated to be competitive with the combined cost of a taxi home plus next-day vehicle recovery — the most common alternative a Night-Out customer would otherwise face — while providing healthy contribution margin after driver compensation. The €100/month subscription tier is designed to convert the Elderly persona and high-frequency Corporate users into recurring revenue, improving lifetime value and providing predictable monthly recurring revenue.

#### PAYMENT INTEGRATIONS (BUILD FOR DIRECT IN-APP CHECKOUT)

- Card Payments — standard credit/debit processing for all major card networks used in Finland.
- MobilePay — the leading mobile payment platform in Finland and the Nordics, for frictionless checkout.
- Corporate Invoicing — centralized billing and multi-user access for business accounts.
- Cash — retained for the Elderly persona and other customers who prefer or require it.

## 4. GO-TO-MARKET & MARKETING STRATEGY

### 4.1 B2B Partnerships

DriveMe's go-to-market strategy is anchored in a B2B partnership model that positions the company within the physical locations where its target personas already gather — high-end bars, nightclubs, five-star hotels, and luxury event planning firms. DriveMe's most valuable acquisition channel is not generic digital advertising but presence at the point of need: the moment a customer is leaving a venue and deciding how to get home, or the moment a hotel concierge is asked to arrange transportation for a guest.

#### HOSPITALITY & NIGHTLIFE PARTNERSHIPS

Formal partnerships with curated high-end bars, nightclubs, and restaurants across Helsinki's city center, Kallio, and Punavuori — including venue staff training, DriveMe signage and QR codes at venue exits, and co-branded first-booking discounts.

#### FIVE-STAR HOTEL PARTNERSHIPS

Preferred-provider agreements with Helsinki's luxury hotel properties, positioning DriveMe as the recommended transportation partner for guest requests and as a direct pipeline into the future chauffeur tier.

#### CORPORATE & EVENT PLANNER PARTNERSHIPS

Direct outreach to corporate accounts and luxury event planners to establish invoicing relationships and feed the custom-package pricing tier.

### 4.2 B2C Hyper-Targeted Digital Marketing

Geo-fenced Google and Facebook/Instagram campaigns targeted at the nightlife districts, hotel clusters, and residential areas of Helsinki, Espoo, and Vantaa, timed to peak demand windows (Thursday–Saturday evenings for Night-Out, weekday business hours for Corporate, seasonal campaigns around Finnish holidays). Physical QR codes distributed through B2B partnerships — bar tabs, restaurant bills, hotel room keys — provide a frictionless path from physical presence to a direct in-app booking.

### 4.3 Viral Loops & Referral Mechanics

A dual-sided referral program rewards both the referring customer and the new user with booking credit, leveraging the social nature of the Night-Out use case. Driver referral incentives reward existing drivers for recruiting and onboarding new drivers who pass DriveMe's vetting process, extending the vetting process through peer reputation while supporting driver-supply growth without proportional recruitment spend.

## 5. OPERATIONAL PLAN, LEGAL & COMPLIANCE

### 5.1 Corporate Structure

DriveMe operates under Mansio Group Oy (Y-tunnus 3631044-9), a private limited liability company (Osakeyhtiö) registered with the Finnish Patent and Registration Office, providing limited liability protection and a well-understood framework for institutional investment, corporate governance, accounting, and tax compliance.

### 5.2 Driver Vetting & Transport Licensing Compliance

DriveMe's entire value proposition rests on the trust customers place in the company to send a qualified, reliable, and safe professional driver to operate their personal vehicle — in many cases, their most valuable physical asset. Driver vetting is treated as a core operational pillar and brand differentiator, not a regulatory checkbox.

#### BACKGROUND CHECKS & DRIVER QUALIFICATION

Every driver undergoes verification of a valid Finnish driving license appropriate to the vehicle categories operated, a clean driving-record check, a criminal background check, and an in-person interview and assessment before activation.

#### TRANSPORT SERVICES ACT COMPLIANCE

Finland's Act on Transport Services, which deregulated the taxi and for-hire transport market from 2018, governs the licensing framework under which DriveMe's drivers and the company operate. All drivers hold the appropriate ajoluvat (passenger transport licenses). DriveMe will engage Finnish legal counsel specializing in transport law to ensure its specific model — a driver operating a customer's own vehicle — is structured in full compliance with licensing, taxation, and labor classification requirements.

#### DRIVER ENGAGEMENT MODEL

The appropriate engagement structure for drivers — employee, independent contractor operating under their own business registration, or a mix by service tier — will be determined in consultation with Finnish legal and tax advisors, with careful attention to correct classification, taxation, pension contributions, and worker protections.

### 5.3 Insurance Structuring

#### CUSTOMER-OWNED VEHICLE COVERAGE (ACTIVE FROM LAUNCH)

A dedicated liability and damage policy covering incidents while a DriveMe driver operates a customer's personal vehicle: third-party injury or property damage, damage to the customer's own vehicle, and clarity on the interaction with the customer's existing insurance so no coverage gaps or premium increases result from using DriveMe.

#### FLEET VEHICLE COVERAGE (ACTIVATES WITH THE COMING SOON CHAUFFEUR TIER)

Comprehensive commercial fleet insurance covering vehicle damage, theft, third-party liability, and passenger liability for the premium fleet, to be structured once the initial S-Class vehicles are acquired.

#### RENTAL ASSET COVERAGE (ACTIVATES WITH THE COMING SOON RENTAL MARKETPLACE)

A marketplace-level insurance framework covering DriveMe-owned rental assets and the liability implications of pairing rental vehicles with DriveMe chauffeurs.

### 5.4 Dispatch Logistics & Scalability

- Driver Pool Management — real-time driver availability, location, and performance ratings for efficient matching.

- Demand Forecasting — anticipating peak periods (Friday/Saturday nights, holidays) to proactively position driver availability.
- Geographic Expansion Replicability — a city-agnostic dispatch design so new markets require driver recruitment and local partnerships, not new technology.
- Quality Assurance Loop — post-booking ratings, performance metrics, and incident reporting feeding continuous service-quality management.

## 6. GROWTH MILESTONES & EXPANSION

### 6.1 Timeline

| Timeline     | Scope                         | Key Milestone                                                                                                                      |
|--------------|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| Months 0–6   | Helsinki, Espoo, Vantaa       | Launch of Phase 1 driver-on-demand booking; target 1,000 active users                                                              |
| Months 6–18  | Tampere, Turku, Oulu, Lapland | Expansion to 5 Finnish cities; scale to 5,000 users; acquire initial S-Class fleet; switch Chauffeur tile from Coming Soon to live |
| Months 18–36 | Sweden, Norway, Denmark       | Nordic expansion; Rental marketplace tile switched live; target €2M+ annual revenue                                                |
| Long-Term    | Global                        | Franchise / licensing model adapting the localized dispatch blueprint                                                              |

The first six months are dedicated to establishing DriveMe's operational foundation within the Helsinki Metropolitan Area, reaching 1,000 active users on the single live booking flow, validating unit economics, and building the initial B2B partnership network. Phase 2 and Phase 3 remain visible in the app as Coming Soon throughout this period so that early users are aware of the roadmap, but neither is bookable until the founder has secured the initial premium fleet — targeted for the Months 6–18 window, funded by Phase 1 revenue and/or the capital raise in Section 7.

### 6.2 Risk Mitigation

#### DRIVER SUPPLY RISK

Mitigated through driver referral mechanics, competitive driver compensation benchmarked against taxi and ride-hailing alternatives, and intentional driver-pool surplus during the initial growth phase of each new city before marketing spend scales demand.

#### REGULATORY SHIFT RISK

Mitigated through proactive engagement with Finnish regulatory bodies, ongoing legal counsel, and an operational structure that meets or exceeds existing licensing and insurance standards.

#### PREMIUM ASSET RISK (PHASE 2 & 3)

Deferred by design: no premium fleet is acquired, financed, or insured until Phase 1 has proven demand and generated cash flow, keeping this risk off the balance sheet until it can be underwritten with real revenue data.

## 7. FINANCIAL PROJECTIONS & CAPITAL ASK

### 7.1 Revenue & Profitability Projections

| Metric     | Year 1   | Year 3                     |
|------------|----------|----------------------------|
| Revenue    | €200,000 | €2,000,000                 |
| Net Profit | €50,000  | €300,000+                  |
| Net Margin | ≈ 25%    | ≈ 15% (reinvestment phase) |

DriveMe's financial projections are deliberately conservative and grounded in the phased scale targets in Section 6, the market sizing in Section 2, and the Phase 1 pricing architecture in Section 3.4. The base case projects Year 1 revenue of €200,000 with €50,000 in net profit, reflecting the lean, asset-light nature of the Phase 1 driver-only model. By Year 3, as the Coming Soon chauffeur and rental tiers come online and the company enters Nordic markets, revenue is projected to reach €2,000,000, with the lower net margin reflecting deliberate reinvestment into fleet acquisition and market entry.

### 7.2 Investment Ask: €500,000 Growth Capital

| Allocation Category                                                       | Share |
|---------------------------------------------------------------------------|-------|
| App & Platform Development (direct booking, dispatch, GPS, payments)      | ~35%  |
| Hyper-Localized Marketing (Helsinki Metro launch)                         | ~25%  |
| Key Management Hires (operations, compliance, growth)                     | ~25%  |
| Premium Fleet Preparation (initial S-Class acquisition) & Working Capital | ~15%  |

The largest allocation, approximately 35%, funds the app and web platform to the standard described in Section 3.1: real-time tracking, dispatch and matching, transparent pricing, and direct in-app payment via card, MobilePay, corporate invoicing, and cash. The remaining allocations fund go-to-market execution, key hires, and the working capital and early planning needed to move toward the founder's stated goal of acquiring two to three premium Mercedes-Benz S-Class vehicles once Phase 1 is proven.

### 7.3 Return Framework & Investor Considerations

DriveMe's growth trajectory is designed to provide a clear line of sight from initial capital deployment to milestone-driven value creation: 1,000 active users and validated Phase 1 unit economics within six months; 5,000 users across five Finnish cities alongside the initial fleet acquisition by month 18; and €2 million-plus in annual revenue with the chauffeur and rental tiers live across Nordic markets by month 36. As with all early-stage venture investments, prospective investors should conduct independent due diligence and consult their own financial and legal advisors. This document does not constitute a binding offer or guarantee of returns.

## 8. BRAND IDENTITY & NOTES FOR THE DEVELOPMENT TEAM

### 8.1 Color Palette

The DriveMe brand and web/app design should use the following palette, matching the printed brand materials on the final page of this document:

| Role                             | Color             | Hex     |
|----------------------------------|-------------------|---------|
| Primary background / base        | Black             | #0A0A0A |
| Primary accent / metallic finish | Metallic Silver   | #B8BCC2 |
| Secondary accent / highlight     | Light Gold        | #C9A961 |
| Text on dark                     | White / off-white | #F5F5F5 |

A minimal, Scandinavian-luxury aesthetic: black as the dominant field, metallic silver for structure (borders, dividers, icons), and light gold reserved for key accents — logo, primary call-to-action, and premium/coming-soon markers — so it reads as a highlight rather than competing with silver for attention.

### 8.2 Booking Flow at Launch

- Book a Premium Driver On Demand — fully bookable, direct in-app checkout (card, MobilePay, corporate invoicing, cash).
- Hire a Chauffeur — visible as a Coming Soon tile; not bookable at launch.
- Rent a Premium Car — visible as a Coming Soon tile; not bookable at launch.

Both Coming Soon tiles should still capture interest — e.g. a “Notify me” action — so demand for the fleet-based tiers can be measured ahead of the Mercedes-Benz S-Class acquisition.

### 8.3 Contact & Registration Details

- Company: Mansio Group Oy — Y-tunnus 3631044-9
- Brand: DriveMe
